

Check logs in cross-sections through WF 6, 7, 8 to see if the open pits are in the Upper or Lower Fall River

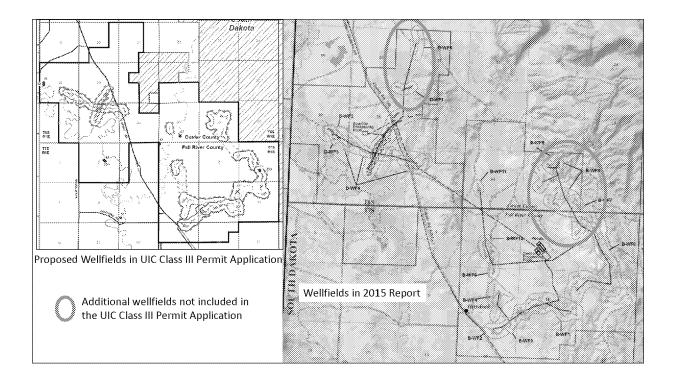

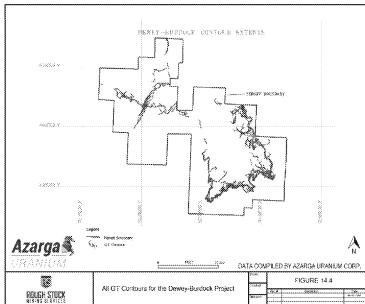

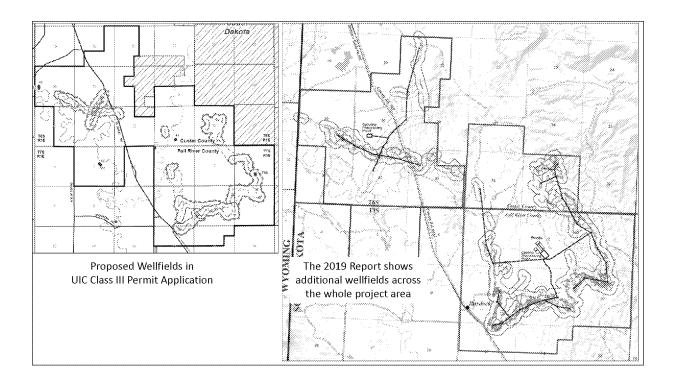

Figure 14.4: All GT Contours for the Dewey-Burdock Project

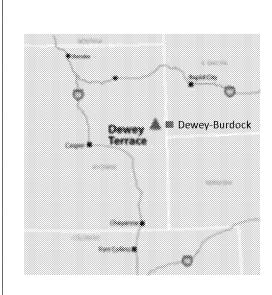

In the 2018 report, Azarga redefined the cutoff grade for uranium resource estimation based on uranium recovery from other ISR operations.

Azarga says it is now following industry standard using the redefined cutoff of grade/thickness (GT)  $\geq$  0.20 rather than the previously used GT  $\geq$  0.50.

No new wellfields are identified in this report, but this figure appears to expand the area of economically recoverable uranium.

Azarga owns the Dewey Terrace property in Wyoming across the state border from Dewey Burdock.

WY DEQ would be the UIC permitting agency for this site.

WY is also an agreement state for the NRC.
